

Introducing The L8 Shower

L8 Shower Technical Specification

Material:

White ABS impregnated with antibacterial additive.

Working pressure Range:

0.5 Bar – 5 Bar

Working Temperature Range:

Up to 75 Degrees

Flow rate:

8 Litres per min at 2.5 bars

Approvals:

Head WRAS approval 1611068,

Hose WRAS approval 1607047

Fittings:

½" BSP

Product Marking:

Dupal on shower face

Colours available:

Blue, Red, Green, Purple

Pricing

0 – 150 units per quarter

£10 per unit

150 – 300 units per quarter

£9 per unit

300+ units per quarter

£8 per unit

Prices include the following:

New head, 1250mm hose, quarterly deliveries, collections and recycling.

NOTE: Longer 1750mm hoses are available on request and are charged at an additional £1.50 each.

Prices exclusive of VAT.

Design Characteristics

When designing the recyclable/ disposable shower, Dupal wanted to make the product as sustainable as they could. They have achieved this by reducing the amount of raw material used. It stands to reason that less raw material reduces the carbon footprint of the product at the manufacturing stage and significantly at the recycling stage.

Visual Audibility Aid

The heads and hoses are a different colour every quarter to allow easy audit of every shower. Once the used heads have been repacked into the delivery boxes, our courier will collect and return them to us for recycling.

Delivery & Packaging

We deliver pre connected shower heads and hoses individually packaged in zip lock bags. This enables estates staff to carry the bags easily. Following removal of the old unit and the new unit being fitted, the old unit simply zips back into the empty bag to avoid any water being leaked throughout the site.

WRAS Approved/Silver Protection

Showerhead and hose are both WRAS approved and colour coded to ensure both are changed quarterly. The head has been designed to be externally smooth with no dirt traps. The internal surface area is low reducing the area water comes into contact with. Following advice given by the infection control, the head is impregnated with an antibacterial additive.
